

Client:

BioModeling Solutions, LLC is registered with the American Academy of General Dentistry (AGD) as an approved PACE provider. BioModeling Solutions, LLC provides educational information and courses for orthodontists, dentists, dental auxiliaries and other medical professionals.

Project Aim:

Dr. Dave Singh is the Founder of the field of epigenetic orthodontics, having realized a few years ago that there is a natural way for the body to move teeth into their correct positions without the use of traditional biomechanical forces.

Solution Offering:

ITShastra developed the dnaappliance.com website. After detailed discussions with the client, a customized web design was provided that reflects the services offered. We also provided an 'easy-contact' option for users around the world - with just a click of the mouse. The website also provides users complete details of the nearest service provider in the world

Features of the website

- ITShastra developed the website in such a way that a user can easily get the details of treatment with the DNA appliance™ as well as other services provided by BioModeling Solutions, LLC.
- The website user gets to view case successfully completed with the DNA appliance in the past.
- Online registrations for the seminars, which are available at different levels, enables doctors to register and pay for the courses with a credit card.
- The Website gives the details about the service providers and their existence around the globe. These details are updated frequently and the interactive map displays the presence of a certified provider of the DNA appliance precisely.
- The website also facilitates the user to contact the service provider nearest to their location by just a click on the website.
- The website also gives the dates and venue details for the next seminar on the DNA appliance to be held by BioModeling Solutions, LLC and/or its partners.
- The user can easily get details of Books, scientific articles and DVDs released by BioModeling Solutions, LLC

WELCOME!

Our innovative solutions provide a natural way for the body to move teeth into their correct positions, using the concept of Epigenetic Orthodontics to enhance craniofacial development. [read more](#)

Traditional orthodontic treatments often use force braces fixed to the teeth, which are worn all the time. Epigenetic Orthodontics is different because instead of using mechanical forces to move teeth, a patented removable Daytime-Nighttime Appliance™ (or DNA appliance™) is worn during the evening and night, and this allows the body to gently correct the positions of the teeth in its own natural way.

Our diagnostic support and treatment solutions provide the tools for natural jaw development and airway remodeling through craniofacial enhancement. In addition, the DNA appliance protocols are effective in addressing issues such as TMD and obstructive sleep apnea in both adults and children without using surgery, drugs or injections.
